When Wone Played Ronkiti

The material in this folder has been prepared by the students in the Social Studies class . These students are teachers in the Elementary Schools in Yap proper and the Outer Islands . As little as possible has been changed in the wording in order to retain the meaning as expressed by these students. The following students and advisors participated in the preparation of this folder.

Marquita Dolores Gilochen
Martha M. Leemad
Josepat Falanug
Frank Seutoy
Francisco Tareg
James Edward Tithin
Ignacio A. Teomal
Falagrong
Angelus N. Yangal
Cosmae Phoruw

English translation of part of the book "Duwen Sohng, Pwuken Wahntuhke ong Pwihn Kewenseu" (About Measurement, An Arithmetic Book for the Sixth Grade).

This booklet is divided into six parts; Part I problems involving linear, square and cubic measurement; Part II, Weight; Part III, Time; Part IV, Liquid Measure; Part V, Measuring by the dozen and the gross. Part VI, Problems About the Earth, the Moon and the Planets, came about because during our summer school we were using "The Golden Treasury of Science" and "The Golden Treasury of Natural History" for our reference books and for individual reading assignments. We were interested in the charts given on pages 205 and 206 of the Natural History. Then, to prove my point that some arithmetic is used in every subject, I suggested making some problems using these figures. This was so much fun that we decided to include these problems in our book and I wrote the background information to go with it.

Following is the translation of the preface, a sample problem from each section and the background information for Part VI.

DUWEN SOHNG: There are many different ways of measuring. To find the length, the width, the heighth or thickness of an object, you use linear measure - inches, feet, yards etc. To find the area of a surface you use square measure - square inches etc. To find the volume or how much space an object occupies, you use cubic measure - cubic inches etc. The volume of liquids is measured in pints, quarts and gallons. To measure the weight of an object you use ounces, pounds, kilograms and tons. To measure the amount or the number of objects you use ones, tens, hundreds or dozens. To measure time you use seconds, minutes, hours, days etc. To measure the cost of an object you use dollars and cents. And to measure a part of a whole, or a part of a whole group, you use halves, fourths, thirds etc. (These are fractions).

Part I, problem 10 page 2:
There are two blackboards in our school at Sekere, one is black and one is green. The black one is 4 feet wide and 6 feet long. The green board is 5 feet wide and 7 feet long.

a. Find the number of square yards in the surface of the black one.
b. Find the number of square feet in the surface of the green board.
c. The surface of the green board is how many square feet larger than the surface of the black one?
d. The perimeter of the green board is how many feet longer than that of the black one?

Part II, problem 7 page 7:
A man makes 7 bags of copra each month. Each bag weighs 100 pounds. He sells his copra to the Co-op for 5¢ per pound. Each month he gives his family $25.00 and saves the rest of his money.

a. How many pounds of copra does he sell each month?
b. How much money does he save each month?
c. The money he saves each month represents how many pounds of copra
